

HERDMaster™

Cattle Squeeze Chute

002-20200

POWDER RIVER®

LIVESTOCK HANDLING EQUIPMENT

Experience the best, the new HERDMaster™ squeeze chute from Powder River. HERDMaster™ chutes are strong, simple, and effective. This new Powder River chute features innovative designs in working ergonomics, operator and animal safety, and the ability of the rancher to do more with less effort.

THE HEADGATE

The HERDMaster curtain style head gate is designed for secure catches and smooth exits. Semi-Automatic mode gives the operator further control when working animals alone. From calf to bull the HERDMaster head gate is an easy choice for any operation. Split stanchion covers offer clean lines. Durable urethane yokes adjust quickly for any animal height. The HERDMaster head gate is truly leading the herd.

EASE OF USE

The HERDMaster squeeze chute leads the industry in usability, ergonomics, and operator safety. It sets the new standard for simple operation. The handles are placed to allow you to work your animals longer with less effort. The new Load Assisted Tailgate lets you control traffic with the flick of your wrist.

THE BENEFIT

The HERDMaster chute receives its heritage from the time tested, proven concepts that we have utilized for over half a century. Powder River has actively built livestock handling equipment for over 70 years and met the demands of our changing industry along the way. We are pleased to introduce the HERDMaster chute to our family.

It is proven that less stress for animals is good for the rancher. Vaccines work better, animals eat more, and it all translates to the bottom line. Being able to successfully catch your animals and then work them efficiently is a direct benefit to your revenue stream.

THE CENTER SQUEEZE

The HERDMaster squeeze mechanism is ground-breaking. It offers advantages of a clear operator working space and enhanced leverage on the controls. A dual sided squeeze means the animal is centered and the 'V' design keeps animals balanced in the chute. The HERDMaster squeezes better and works safer. The chute features the easiest center squeeze release in the industry.
