—PRESSURE TREATED POSTS & POLES—

These wood posts and poles are all pressure treated with MCA (Micro Copper Azole) or ACQ (Alkaline Copper Quaternary) wood preservative for ground contact. The treatment protects the wood against decay and wood destroying insects. The chemicals leave the wood a light green color. **Post diameter indicates the measurement at the small end of the post or minimum diameter.** Galvanized or stainless steel fasteners are recommended for use in preserved wood. Do not use preserved wood in direct contact with aluminum. Ask for a Safe Handling Information Sheet for use & handling recommendations.

Height	Diameter	Price per Each	Height	Diameter	Price per Each
6 1/2'	4" up to 5" <small>50R 95S</small>	\$ 14.95	8'	4" up to 5" <small>95</small>	\$ 17.95

WIRE FENCING PRODUCTS

Field Fence

All STOCKYARDS Field Fence Items Are American Made!

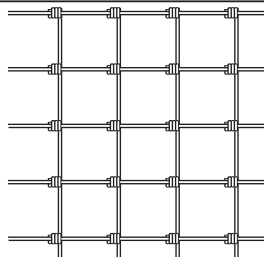

Uniform crimps and high quality steel keep the fence tight through all the seasons. The top and bottom line wires are heavier to give you more strength where you need it. Wire spacing is graduated so that spaces at the bottom are smaller to turn smaller animals. Class 1 galvanized is ASTM A-116 cert.

330' Per Roll

1972-4-12 1/2	4" x 4"	72"	12 1/2 Gauge	Class 1	384 lbs	438.45

78" High Tensile Game Fence

In 330' Rolls

The cost-effective way to confine deer, elk and other game animals. Whether you are keeping game in or keeping game out, Game Fencing with a barbed wire on top with a height of 84" is considered the ultimate system in deer & small game fencing. Graduated Spacing allows you to keep small predators and large game from foraging crops or attacking livestock. Game fencing has small, tight openings at the bottom with larger openings at the top. By graduating the spacing, weight and cost is reduced. High Tensile wire in Game Fence offers more strength than standard wire with less weight. This high-tensile (high carbon) system also resists sagging. The wire is galvanized to Class 3 specifications for a longer lifetime than ordinary galvanized wire. The greater height eliminates the need for "stacking" two rolls of field fencing.

Number	Type	Height	Gauge	Galvanizing	Weight	Price
1578-6-12 1/2	High Tensile	78"	12 1/2 Gauge	Class 3	266 lbs	\$ 404.45

72" Field Fence

12 1/2 ga. line & stay wires with 10 ga. top & bottom wires. The square knot provides extra vertical strength to withstand impact. **Class I Galvanized** fence resists corrosion. Continuous vertical and horizontal wires, wrapped in a knot with a third wire, provides the strength and rigidity. 330' Per Roll.

Number	Type	Height	Gauge	Galvanizing	Weight	Price
1472-6-12 1/2	Square Knot	72"	12 1/2 Gauge	Class 1	248 lbs	\$ 316.45

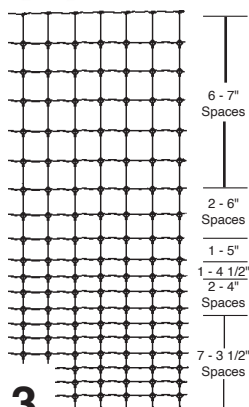

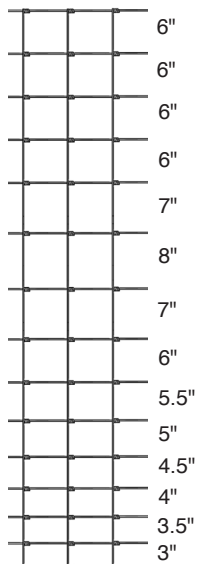

Fixed Knot High Tensile Game Fence

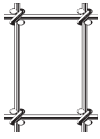

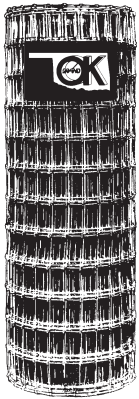

96" Game Fence offers high tensile performance to the game rancher with tall needs. Both horizontal line and vertical stay wires are of 12 1/2 ga. high carbon steel. Lighter & Stronger High tensile fencing weighs one-third less while offering the same linear strength as standard low carbon wire fencing and is easier to handle and install. Class 3 Galvanizing weathers the elements with the long lasting protection of .8 to 1.1 oz per sq. ft. of zinc. The Fixed Knot leaves no sharp edges reducing injuries, cuts and abrasions. The stay wires combine with the knots and tension curves for superior rigidity and elasticity spreading impact loads to dissipate over the fence's height and width.

Number	Type	Height	Gauge	Galvanizing	Weight	Price
2096-6-12 1/2	Fixed Knot	96"	12 1/2 Gauge	Class 1	395 lbs	\$ 550.45

12 Or More 495.45

WIRE FENCING PRODUCTS

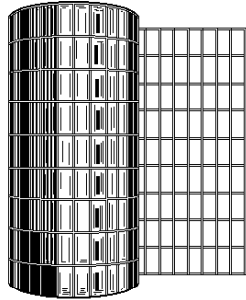

2" x 4" Horse Fence

Provide a safer environment for your animals! Easy and economical to install with wood or steel posts. **Horse Fence** is designed to prevent snags that cause blemishes to a horse's coat. The "wire knot" construction provides a wire mesh that's completely smooth on both sides as well as the top. The close 2" x 4" spaces helps prevent horses feet from stepping through and becoming caught or injured. The vertical wires are "Stiff Stay" being one continuous straight length from top to bottom. This helps the fence resist being pushed down. **Max-Tight Class 1 Galvanized**

	Size	Gauge	Weight	Price

WHITE VINYL POST & RAIL FENCING

Bufftech

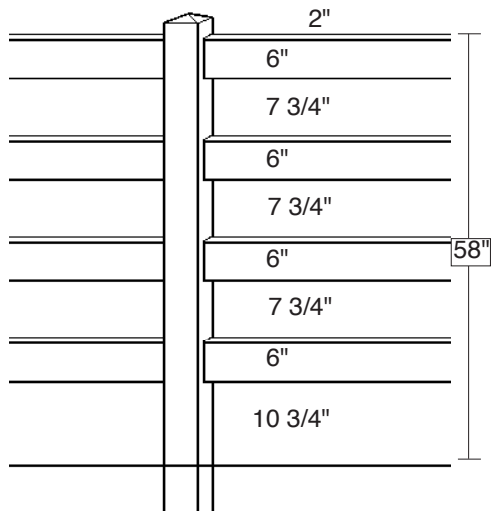

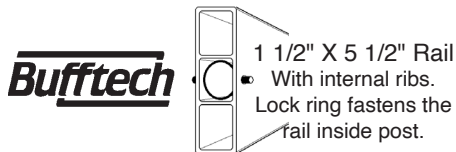

Bufftech is a quality brand name of **Certain Teed**, a world leading manufacturer of building materials with a major commitment to a wide range of vinyl products including fence. **Bufftech** has developed a state-of-the-art co-extrusion process to manufacture vinyl fencing which results in a higher concentration of UV protection in the outer cap, while providing for exceptional impact resistance throughout the fence. These layers cannot separate. **Lineal foot prices are complete with line posts 8' on center, rails, post caps & lock rings.**

Baler Wire

American made best-quality wire at a very competitive price. Uniform annealing, size and well oiled for a high level of trouble-free operation in the field. Manufactured to the rigid specifications of the American Society of Agricultural Engineers. The highest level of quality control is maintained throughout the manufacturing process. This means bales tied tight that stay tied with minimal breaking or tangling problems. Good working wire at the everyday low price you expect from **STOCKYARDS.**

Galvanized Stock Tanks

STOCKYARDS stock tanks are made of only G-90 heavily galvanized steel. Two deep drawn swedges are rolled into each tank for maximum strength. One swedge is near the bottom and one just below the top. The top rim is reinforced with heavily galvanized tubing permanently rolled into the top edge of the tank. This strong reinforcement is the backbone of the tank and takes most of the strain of pushing and crowding livestock. The rounded top presents a smooth edge that cannot injure stock. All 2' deep tanks have a drain plug at the bottom for easy draining and cleaning. These features add up to the best made and longest-lasting stock tank you can buy! Extra heavy 20 gauge steel bottom provide rugged durability.

—EQUUS DUTCH DOORS WALKDOORS—

EQUUS STALL SYSTEMS

Typical Horse Stall Layout

The **EQUUS** system combines the strength and flexibility required for a easy to assemble stall system. Heavy gauge galvanized steel components guard against rust and corrosion. Custom design of your stall is easy with **EQUUS**. Choose from grill sections, sliding door packages, end channels, wall braces, feeder doors. Stalls can be built to nearly any size needed and they are easy to install in your barn.

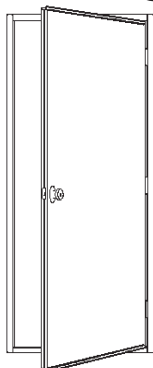

Dutch Door Kit 16 Gauge white steel frame and crossbuck components to prevent cribbing and sagging (the two most common problems with swinging dutch doors). Strap hinges, barn latch, barrel bolt, astragal and fasteners included. Un-assembled in (2) cartons. Requires 3/4" plywood. Flat steel can be added to front and rear to cover plywood. 4' x 7' size consists of 2 panels. Suggested rough opening 49 1/8" x 87 1/2". **\$ 730.00**

Steel Door Frame 3 Piece for Dutch Door RO is 49 1/8" x 87 1/2". **\$ 600.00**

Pre-Hung Steel Door Units

3 1/2" - 16 Ga. Frame

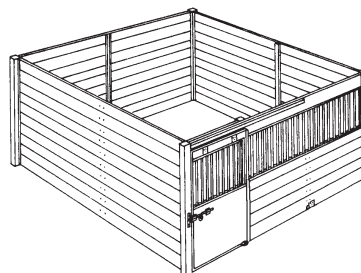

1 3/4" Thick R-11 door panel with 26 gauge steel. Pre-hung with universal 4-way swing in a 16 gauge, 3 5/8" steel frame. Full perimeter weather strip. Complete with lockset, 2 3/4" backset. Prefinished white.

Door	Actual Size	Price
3' 0" x 6' 8"	38 5/8" x 80 5/8"	\$ 475.00
4' 0" x 6' 8"	48 5/8" x 80 5/8"	665.00
Lever & Lock Set	Latch Kit	51.00

Grill Section: (Model 4000) 7/8" Galvanized pipes spaced on 4" centers allowing openings of 3 1/8". Galvanized U-channel top and bottom rail fit over standard 1 1/2" lumber. Rubber bushings installed on channel eliminate rattling of bars. Height is 32 3/4". Lengths available are 24" or 48" and can easily be field cut to any size required.

Grill Sections — 48" — \$ 94.90
Grill Sections — 24" — 67.90

EQUUS

End Channels (Part #4501) Constructed of 16 gauge galvanized steel for 1 1/2" standard lumber. Comes complete with fasteners for installation of front, back or intermediate stall walls with or without grills. Fast installation and easy removal as necessary. Length: 48" **\$ 27.90**

Header Channel (Part #4502) Designed to hold header board in place above grill section. Complete w/ fasteners. Length: 7" **\$ 9.40**

Wall Brace (Part #4503) Ties wall boards together for extra strength. Heavy 16 gauge steel formed to prevent sharp edges. Complete with fasteners. Size: 48" **\$ 26.50**

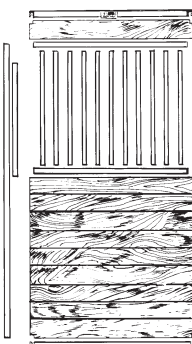

Feeder Door (Part #4250) Fits in standard grill section and swings right or left. Constructed of 18 gauge galvanized steel with spring-loaded latch. Size overall: 31 3/4" x 15 1/4" **\$ 74.90**

Slide door kit includes:

- 2-Vertical U-channels-16 gauge.
- 2 Vertical reinforcement channels
- Top & bottom horizontal channels
- Grill assembly (pipes & U-channels)
- All fasteners required

Needed to complete door:

- 1 pc. 4'x 8'-3/4" plywood and 1 pc 2" x 6" - 4' or
- 10 pcs. 2" x 6" - 4'
- Track Hardware

Sliding Door Kit (Model 4800) consists of the sliding door frame (vertical & horizontal u-channels), grill section and reinforcement channels all pre-punched for installation of fasteners which are included. Top rail is prepunched ready to accept drop-bolt trolleys. Door is designed to use one sheet of 3/4" plywood cut in half for bottom section or you may use standard lumber (1 1/2" thick). Use of plywood is recommended to avoid warpage & twisting. **4'x7' Stall Door Kit \$ 217.00**

Needed to complete door:

- 1 pc. 4'x 8'-3/4" plywood and 1 pc 2" x 6" - 4' or
- 10 pcs. 2" x 6" - 4'
- Track Hardware Package

Slide door kit includes:

- 2-Vertical U-channels-16 gauge.
- 2 Vertical reinforcement channels
- Top & bottom horizontal channels
- Grill assembly (pipes & U-channels)
- All fasteners required

STALLS MATS GATES KENNELS

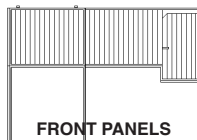

This free standing system has easy pin-together connections. The panels can also be attached to your existing walls using wall connectors. The lower 4' of the panels are designed to be filled with customer supplied 2" lumber (1 1/2" finished size). The vertical bars are of 1/2" diameter steel rods spaced 3" apart. Stall fronts come with a 4' wide sliding door and a 2' wide swinging feeder door. An optional corner feeder can be attached to the feeder door for easy swing-out feeding from the aisle. Solid dividers, dividers with bars and stall fronts are all 7' high and offered in 10' and 12' lengths. All stall panels are 2" short of the called size. 10' panel = 9'10" overall, 12' panel = 11'10" overall. Wall, 2-way, 3-way & 4-way connectors fasten panels at the corners. All 14 gauge, 2" tubular frames and channels. Graphite Gray.

Manufactured with an environmentally safe polymer bonding agent, these 3/4" thick rubber stall mats provide a softer more resilient surface with increased tensile strength over re-vulcanized mats. They have precision sheared edges for a tighter fit at joints, are non-porous and are easily installed over any surface. With two unique surfaces on one mat, smooth or textured anti-skid, these mats excel in trailers as well as stalls.

Deer Gates

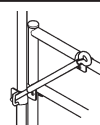

Behlen Country Deer Gates are designed to keep deer, elk, and other wildlife out of your fields. This 84" tall gate is galvanized for long life and they come with three bolt and hook hinges that make the gate reversible for any application. The tubular and mesh design is perfect for keeping unwanted animals out of designated areas. Note: All gates are 4" less than listed length to allow for gate hardware and proper clearance.

CUSTOM ROOFING & SIDING

High Tensile Steel

Our steel ribbed panels are roll formed under stringent quality control to exacting specifications using only "full hard" 80,000 PSI tensile strength 29 gauge steel for maximum load carrying capability. It has exceptionally high spanning properties for its thickness and weight, and provides spring-like resistance to abuse.

Attractive Ribbed Design

Steel ribbed panels look sharp on your buildings. Main rib is 9" on center to cast a shadow and give your building that board and batten look. One or two small stiffening ribs are spaced between the main ribs. Designed for good looks and maximum strength.

Custom Cut Lengths:

All steel ribbed panels are custom cut to your specified lengths right off the fabrication machine. **Allow 7 to 10 days lead time.** We do not round to the nearest foot on lengths when figuring your cost....you pay only for what you get.

36" Coverage

Steel ribbed panels are 38" wide giving 36" coverage which allows you to install it faster. This means fewer rows, fewer panels, fewer sidelaps, faster application with less time spent fitting panels into place. It can be quickly secured into place with screws. Price is based on actual 36" actual coverage.

Weathertight Lap Design

The unique siphon groove on the side of the panel interlocks with the side of the next panel to form a weathertight seal. This design permits a free-flow water runoff while the drain helps channel out water that might be forced into the snug-fitting lap.

Deposit required on all orders. This product is a customized special order & non-returnable.

ROUND TRACK SLIDING DOOR HARDWARE

KEYHOLE TRACK is round, self-cleaning track. Hanger brackets tap into keyholes prepunched on 2' centers, in the top of the track. Three types of hanger brackets are available, face mount, face mount with track cover and double track for by-passing doors. Designed for doors weighing up to 600 lbs. Track is 14 gauge galvanized steel. Splice collars are used for joining sections of track. End caps provide protection from dust, debris & birds. Made in the USA.

Track cover brackets allow for the easy installation of trim to cover your door track. They quickly and securely snap into place with the tap of a hammer.

Track end plugs bird-proof and close the ends of the track.

Splice collars are used to lock two track sections in perfect alignment at the joints.

WOOD POST & RAIL DETAIL

POST & DOWELLED RAIL FENCING

Drilled 16" On Center for Rails

Rails are dowelled to 2" diameter to fit in posts. Posts & Rails are Treated Pine with Micro Copper Azole wood preservative for ground contact, decay and wood-destroying insects.

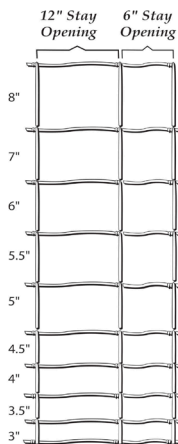

ANIMAL CONTAINMENT FOCUS

Top-Rail finish height 54" up to 60" above ground for use with wire mesh.

2" x 4" No-Climb Horse Fence for penetration-proof wire barrier.

Sleek appearance with functionality for pastures, arenas, bridle paths, and more!

Use as a 60" height perimeter on gardens and orchards to keep bigger critters from having a nibble.

NON-EQUINE CONTAINMENT

Premium Hinge-Joint Field Fence guards against small and large animals. **Graduated Opening Spaces** for smaller animal at the bottom while maintaining strength and rigidity for larger animals.

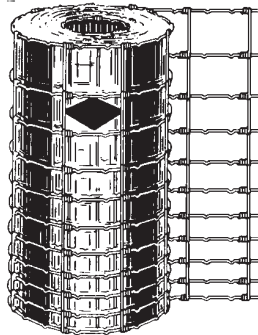

Ideal for your family of sheep, goats, alpacas, and more!

Heights from 26" up to 56" with zinc coating for lifetime.

Hinge-Joint knot allows the fencing to **flex** under pressure and spring back into shape.

Expands and contracts under changing weather conditions for flexibility and strength against snowload, tumbleweeds, and other debris.

Solid construction for any terrain, built to last.

MEASURE AND SET

Posts placed 8' apart for 8' Turned Rails.

Set Posts as you go for best stability.

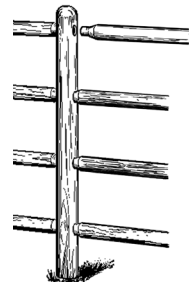

Rotate Rails to deter distortion and wear from elements.

WESTERN DOWL FENCE OPTIONS:

3-RAIL 2-RAIL 4-RAIL 1-RAIL

TYPE	COUNT
IN-LINES

ENDS	
WIRE	
RAILS	
GATE GAPS	
H-BRACES	

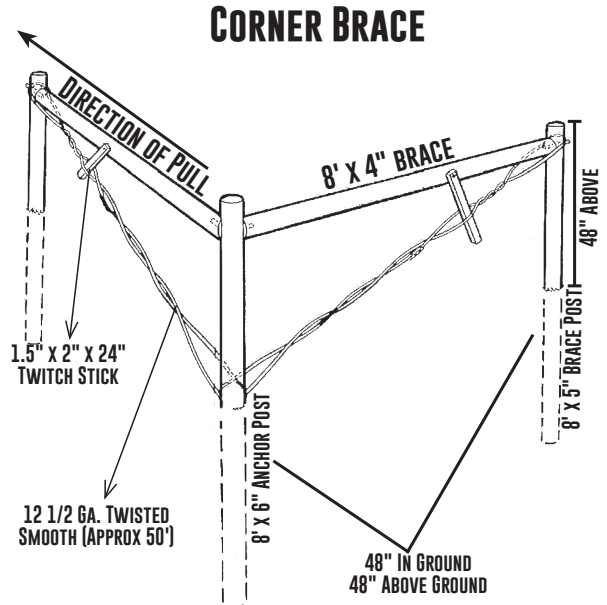

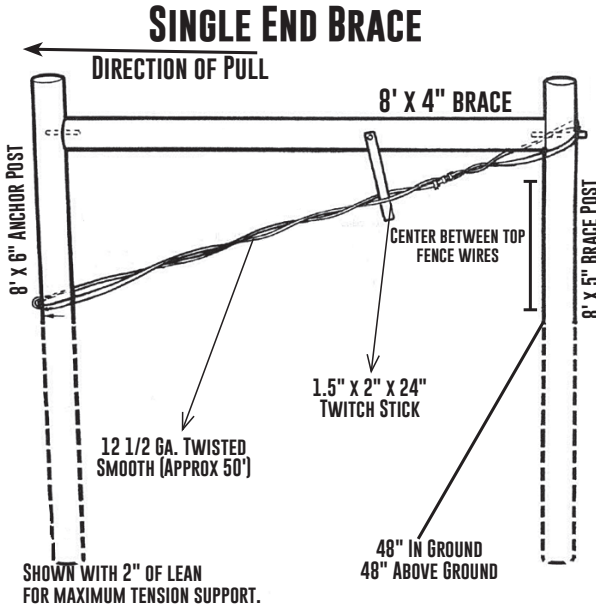

* Set your posts using no more than 20lbs of dry mix to ensure room for moisture release and increased lifetime.

POST & WIRE PLAN DETAIL

END & CORNER BRACES:

The corner and end braces are the most important elements of any fence system. Particular attention ought be paid to their construction and installation. In some cases of higher tension, anchor posts are shown to lean away from the direction of pull. Pack dirt solidly around your anchor posts, packing only a few inches of dirt at a time to hold the post rigid. Brace wire, made of 12 1/2 gauge twisted smooth in most common cases, is wrapped twice around your anchor posts, pulled tight, and spliced. The taller the fence, the taller your posts need to be and the more particular you should be about how you want to brace and support your fence line.

ACREAGE & FENCE LINE:

"I have 5 acres to fence around, how much fence do I need?" **43,560 Square Feet Per Acre**

Step 1:

Multiply Square Feet Per Acre by Number of Acres:

$$43,560 \times 5 \text{ Acres} = 217,800 \text{ square feet in 5 acres}$$

Step 2: Find the Square Root of the Total Square Footage:

$$\sqrt{217,800} = 467 \text{ lineal feet}$$

Step 3: You now have the length of one side assuming the piece is square!

467 lineal feet on one side of your acreage!
